

Areas

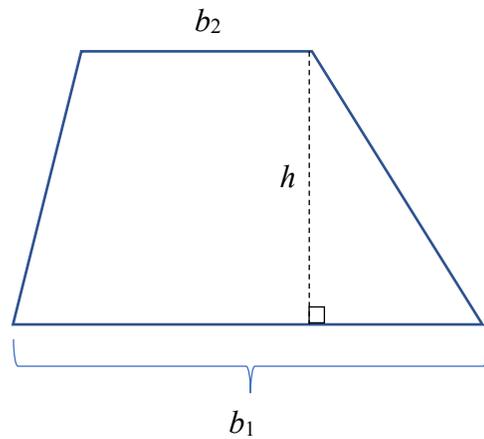

Triangle

$$A = \frac{1}{2}bh$$

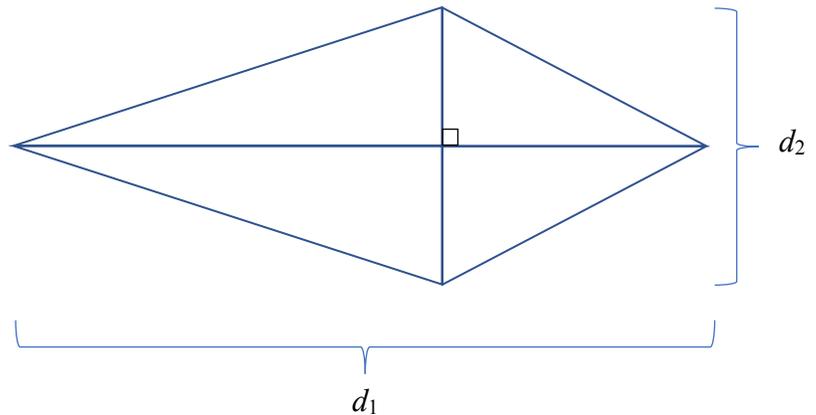

Trapezoid

$$A = \frac{1}{2}(b_1 + b_2)h$$

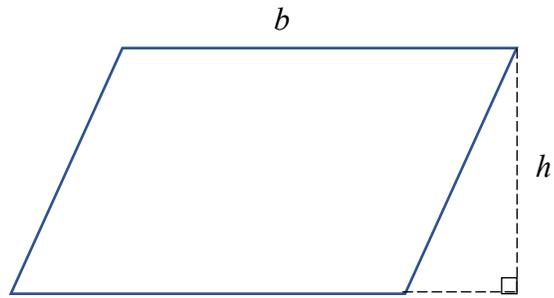

Kite

$$A = \frac{1}{2}d_1d_2$$

Parallelogram

$$A = bh$$

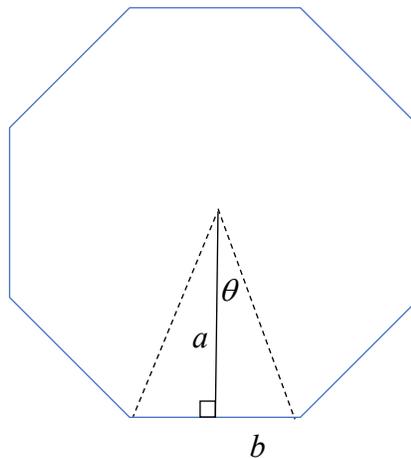

Regular Polygon

$$A = \frac{1}{2} aP$$

$$\tan \theta = \frac{b}{a} \Rightarrow a = \frac{b}{\tan \theta}$$

$$\theta = \frac{360^\circ}{2n}$$

n = number of sides in the regular polygon

Circle

$$A = \pi r^2$$

$$C = 2\pi r$$
