

Finding Angles With the Calculator Part II (Std A4c)

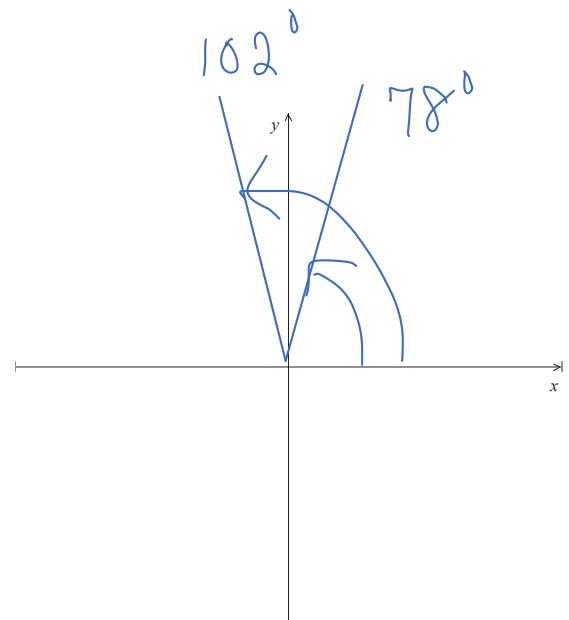

Name _____

Find all possible solutions to the given trig expression and sketch the two terminal sides on the axes below.
Start with angles between 0° and 360°

1) $\sin \theta = 0.9781476007 \Rightarrow \sin^{-1}(0.9781476007)$

$$\theta = 78^\circ, 180^\circ - 78^\circ = 102^\circ$$

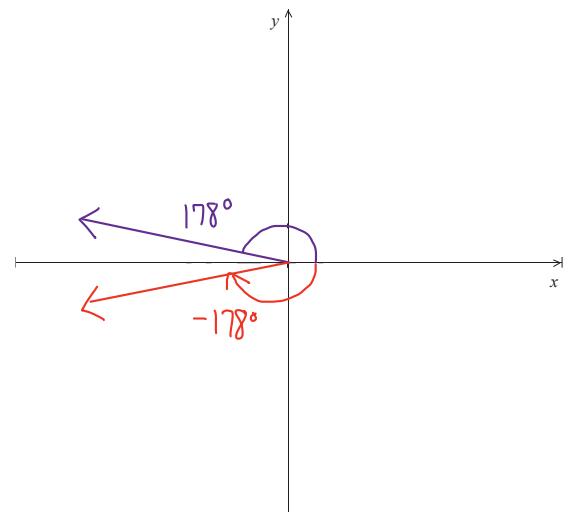

$$\theta = \begin{cases} 78^\circ + 360^\circ n \\ 102^\circ + 360^\circ n \end{cases}$$

2) $\cos \theta = -0.999390827$

$$\cos^{-1}(-0.999390827) = 178^\circ$$

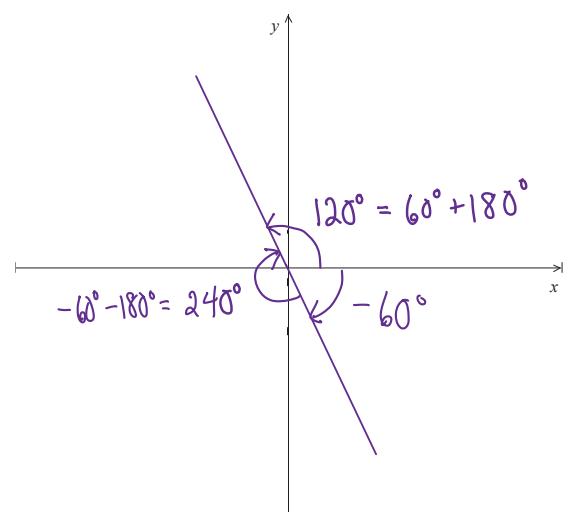

$$\theta = \pm 178^\circ + 360^\circ n$$

3) $\tan \theta = -1.732050808 = -\sqrt{3}$

$$\theta = \tan^{-1}(-1.732050808)$$

$$= -60^\circ + 180^\circ n$$

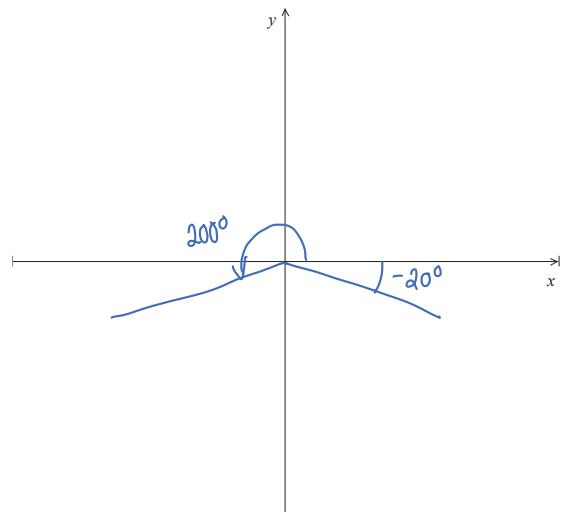

4) $\csc \theta = -2.9238044$

$$\sin^{-1}\left(\frac{1}{-2.9238044}\right)$$

$$\theta = -20^\circ$$

$$\theta = 180^\circ - (-20^\circ) = 200^\circ$$

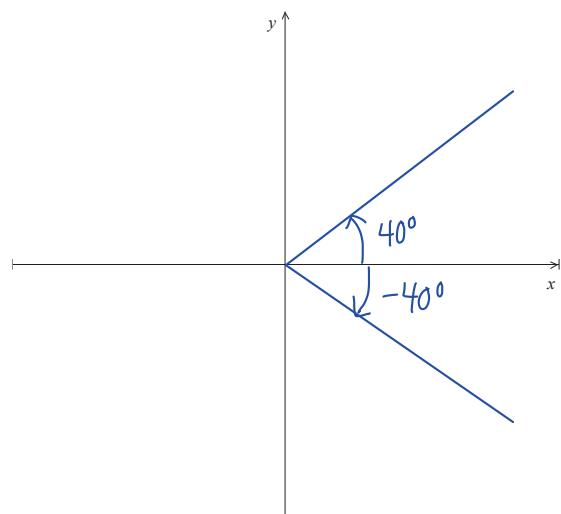

$$\theta = \begin{cases} -20^\circ \pm 360^\circ n \\ 200^\circ \pm 360^\circ n \end{cases} \text{ or } \begin{cases} 340^\circ \pm 360^\circ n \\ 200^\circ \pm 360^\circ n \end{cases}$$

5) $\sec \theta = 1.305407289$

$$\theta = \cos^{-1}\left(\frac{1}{1.305407289}\right)$$

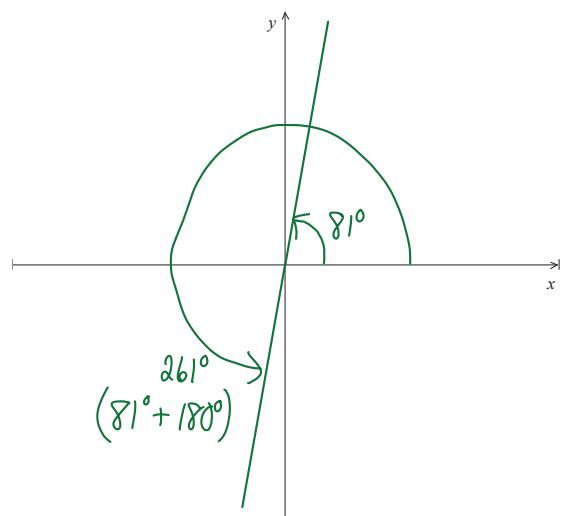

$$= \pm 40^\circ \pm 360^\circ n$$

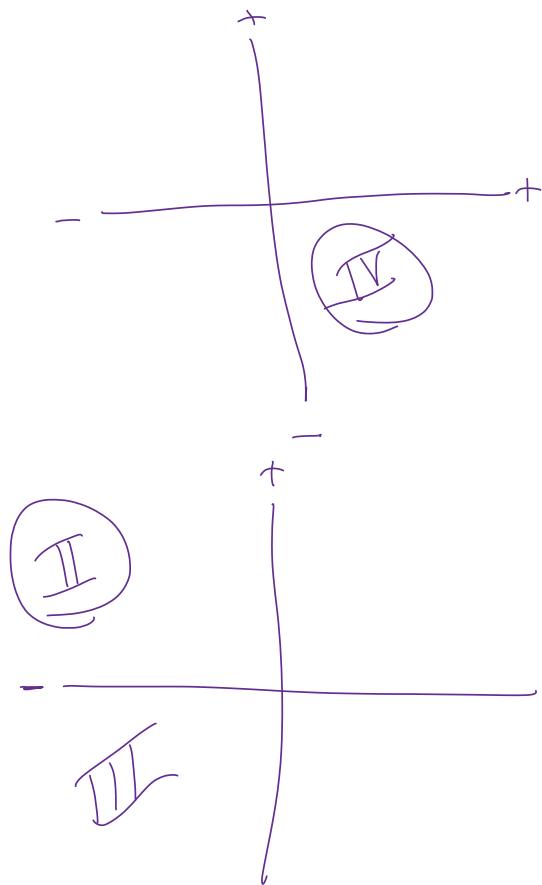

6) $\cot \theta = 0.1583844403$

$$\theta = \tan^{-1}\left(\frac{1}{0.1583844403}\right)$$

$$= 81^\circ \pm 180^\circ n$$

$$\sin \alpha = \frac{y}{r} \quad \tan \alpha = \frac{y}{x}$$

$$1 = \text{y}$$

$\rightarrow = \text{y}$

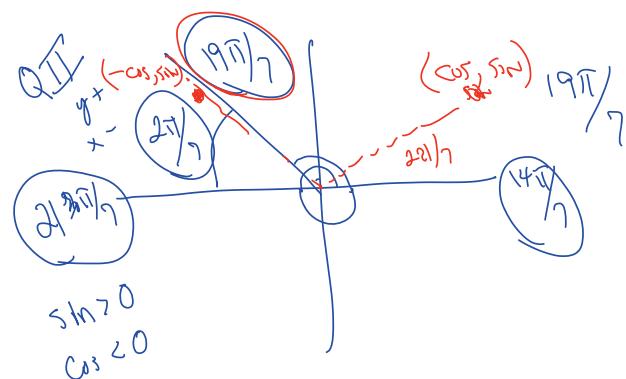

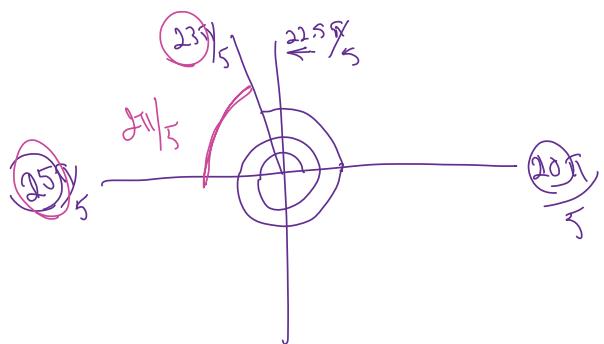

$$y < 0$$

$$x > 0$$

$$\sec \alpha = -\frac{17}{8}$$

$$\tan x = \frac{15}{4} - x$$

$$= \frac{r}{-x}$$

Final Exam

- In person - you must be here
no options to work from home
 - off on the other day
- Cohort X - you will hear from me
